Characteristics of Proteus vulgaris

Proteus vulgaris also has distinct **characteristics** that set it apart from other Gram negative bacteria. One feature is that they are very motile and literally "swarm" across the plate. This causes a thin film to form on top of the bacteria and a slight color change occurs.

Proteus vulgaris

Proteus vulgaris is a rod-shaped, nitrate-reducing, indole+ and catalase-positive, hydrogen sulfide-producing, Gram-negative bacterium that inhabits the intestinal tracts of humans and animals. It can be found in soil, water, and fecal matter. It is grouped with the Enterobacteriaceae and is an opportunistic pathogen of humans. It is known to cause wound infections and other species of its genera are known to cause urinary tract infections.
